RE: MUL250018

A Chara,

The Marine Divisions of the Department of Agriculture, Food and the Marine (DAFM) welcome the opportunity to provide comments on the application for a Maritime Usage Licence to undertake traditional hand harvesting of seaweed resources along shorelines in Rosmuc and associated island within Cill Ciaran Bay, County Galway.

It is essential that the sea-fishing and aquaculture sectors are fully recognised and given a high priority as a long-standing, pre-existing, and traditional activity in the marine environment as the proposed harvesting of seaweed resources is being evaluated.

Fishers and aquaculture site holders are primary food producers dependent upon certain marine areas which are particularly important for food production. This primary production is critical to supplying the downstream indigenous seafood processing and export industries and in sustaining the livelihoods of coastal communities. The importance of these primary and secondary food production activities is reflected in the Government's Food Vision 2030 policy.

The seafood sector, including fishing, aquaculture, processing and ancillary support services, is an important source of employment in rural and coastal areas. BIM's [Business of Seafood 2024](#) report outlines that approximately 16,874 jobs (direct and indirect employment) are reliant on the seafood sector. The sector supports economic activity in peripheral coastal communities right around our coast.

To inform the DAFM comments, the observations of the Marine Institute (MI) and Bord Iascaigh Mhara (BIM) on the application were requested.

BIM advised that they promote sustainable management of environmental resources and the use of best practices. Due to overlaps, the proposed hand harvesting seaweed activity would need to be compatible with existing active licenced aquaculture and inshore fisheries activities within the sought application area.

MI note that it is likely that the proposed harvest rates are sustainable based on historic harvesting, however without any in-situ area specific estimates of *Ascophyllum nodosum* and *Fucus vesiculosus* or productivity this cannot be definitively stated. DAFM would highlight the MI statement that the lack of data is of concern.

DAFM recognises that the applicant's aim is to promote co-existence and minimise potential disruption to commercial fishing activities in the area. The evaluation of potential impacts of

seaweed harvesting on commercial sea fishing activities needs to be given consideration within the context of the requirements set out under the Maritime Area Planning Act and the National Marine Planning Framework (NMPF).

The principles in the NMPF of avoiding, minimising, or mitigating impacts on access to existing activities (including specific policies on Fisheries and Aquaculture) should be followed and any proposed development activity should incorporate the principle of maximising coexistence with established activities in marine areas.

DAFM notes that the area of Kilkieran is subject to an Oyster Fisheries Order. DAFM would advise engagement with the relevant government Department responsible for further information.

Vessel Monitoring System (VMS) data regarding fishing in, and around, the licence application area may be limited as many of the vessels in the inshore fishing segment (less than 12 metres in length) are not currently required to carry VMS on board. While the proposed activity is not anticipated to impact unduly on inshore fishers, relevant local fishing organisations should nevertheless be engaged with at the earliest opportunity, to avoid disruption and any potential displacement.

Organisations representing inshore vessels include:

- The National Inshore Fisheries Forum (NIFF): <https://inshoreforums.ie/niff/>
- The Irish Islands Marine Resource Organisation (IIMRO): <https://www.iimro.org/>
- The National Inshore Fishermen's Association (NIFA): <https://inshore.ie/>
- West Regional Inshore Fisheries Forum (WRIFF): <https://inshoreforums.ie/west-overview/>

DAFM acknowledges that a biomass survey will be carried out prior to any potential harvesting taking place.

DAFM would seek confirmation, that where there are any indirect impacts on traditional fishing grounds identified, consultation with local stakeholders will be undertaken prior to and throughout the harvesting activities and a Fisheries Liaison Officer (FLO) will be appointed to liaise with all the relevant sea going and foreshore users in advance of any marine survey operations. Please also find attached document(s) from the MI and BIM which provide further comments for consideration.

Yours sincerely,

Marine Divisions
