RE: MUL260003 – Oceyon Ag

A Chara,

The Marine Divisions of the Department of Agriculture, Food and the Marine (DAFM) welcome the opportunity to provide comments on the application for Maritime Usage Licence - MUL260003. The application requests a licence to test equipment, to survey and support the salvage of anthropogenic structures in the North Atlantic and to deploy non-invasive survey technology at a number of wrecks along the south coast.

It is essential that the sea-fishing and aquaculture sectors are fully recognised and given a high priority as a long-standing, pre-existing, and traditional activity in the marine environment as the proposed surveys are being evaluated.

Fishers and aquaculture site holders are primary food producers dependent upon certain marine areas which are particularly important for food production. This primary production is critical to supplying the downstream indigenous seafood processing and export industries and in sustaining the livelihoods of coastal communities. The importance of these primary and secondary food production activities is reflected in the Government's Food Vision 2030 policy.

The importance of the seafood sector to our coastal communities is highlighted in BIM's [Business of Seafood 2024](#) which sets out that the total GDP of the seafood sector was €1.24 billion in 2024, and employment increased to 16,874 (direct and indirect jobs) from 15,673 in 2023.

To inform the DAFM comments, the observations of the Marine Institute (MI), Bord Iascaigh Mhara (BIM) and Sea Fisheries Protection Authority (SFPA) on the application were requested.

The agencies agree with the AIMU report, which states that there will be no significant impact on the fisheries and aquacultures in the area, as the survey is limited to a short duration per site, consists of a single vessel and is surveying locations not suitable for fisheries or aquaculture.

DAFM notes that while the proposed survey works are not anticipated to impact on inshore fishers, relevant local fishing organisations should nevertheless be included on the provision of any Notices to Mariners and be made aware of any survey works at the earliest opportunity. This will ensure the optimum coordination of activities and to limit potential disturbances to fishing activities to the greatest extent possible.

DAFM recognises that the developer's aim is to promote co-existence and minimise potential disruption to commercial fishing activities in the area. The evaluation of potential impacts of the surveys on commercial sea fishing activities needs to be given consideration within the context of the requirements set out under the Maritime Area Planning Act and the National Marine Planning Framework (NMPF).

The principles in the NMPF of avoiding, minimising, or mitigating impacts on access to existing activities (including specific policies on Fisheries and Aquaculture) should be followed and any proposed development activity should incorporate the principle of maximising coexistence with established activities in marine areas.

Please also find attached document from the SFPA which provide further comments for consideration.

Yours sincerely,

Marine Divisions
